

GitHub Actions CI Configuration Guide

This document outlines the required directory structure and the configuration file for your Android CI build on GitHub.

Required Directory Structure

To enable GitHub Actions, you must place your configuration file within the `.github/workflows/` directory of your repository root:

```
/ (root) ├── .github/ | └─ workflows/ | └─ ci-build.yml ├── app/
└─ build.gradle └─ gradlew └─ ... (other project files)
```

Configuration File: ci-build.yml

Save the following content into `.github/workflows/ci-build.yml`:

```
name: Android CI Build

on:
  push:
    branches: [ "main" ]
  pull_request:
    branches: [ "main" ]
  workflow_dispatch:

jobs:
  build:
    runs-on: ubuntu-latest
    steps:
      - uses: actions/checkout@v4

      - name: Set up JDK 17
        uses: actions/setup-java@v4
        with:
          java-version: '17'
          distribution: 'temurin'

      - name: Set up Android SDK
        uses: android-actions/setup-android@v2
```

```
- name: Install SDK components
  run: |
    sdkmanager "platforms;android-36" "build-tools;36.0.0" "platform-tools"

- name: Grant execute permission for gradlew
  run: chmod +x gradlew

- name: Build with Gradle
  run: ./gradlew assembleDebug
```
